PROFESSIONAL SUMMARY

System and Network Administrator with hands-on experience in Linux servers, virtualization, and network operations. Proven in maintaining infrastructure reliability, handling incidents, and supporting production environments. Currently pursuing a Bachelor's degree (S1) with a long-term goal of transitioning into Software Engineering.

EDUCATION

Bachelor's Degree (S1) – Informatics Engineering

Indraprasta PGRI University

Jakarta, Indonesia

2023 - Present

Computer and Network Engineering

Taruna Abdi Bangsa Vocational High School

Kebumen, Central Java, Indonesia

2015 - 2018

WORK EXPERIENCE

IT Network Operation Center (NOC)

Samudra Kilat Indonesia

Jakarta, Indonesia

February 2022 - Present

- Monitor network and system performance to ensure service availability and uptime
- Troubleshoot network and system issues, including connectivity, routing, and server-related problems
- Configure and maintain routers and switches to support daily network operations
- Perform server backup and restoration to ensure data integrity and business continuity
- Assist in server migration activities with minimal service disruption
- Prepare and maintain Linux server configurations based on operational requirements
- Handle VPN tunnel, cloud connectivity, failover, load balancing, firewall, VLAN, OSPF, and static routing issues
- Diagnose and resolve database-related issues on production servers
- Handle mail server issues, including mail delivery problems and email filtering configurations
- Manage and troubleshoot IP PBX / VoIP systems, including extensions, call routing, and connectivity issues
- Assist in resolving inbound and outbound call quality issues related to network or server configurations
- Escalate critical incidents and coordinate resolution based on SLA priorities

Network & System Administrator (Remote)

Botnix

Jakarta, Indonesia

December 2020 - Present

- Troubleshoot network and system issues to maintain service stability and uptime
- Manage and maintain Virtual Private Servers (VPS), including monitoring, incident handling, and basic optimization
- Troubleshoot and maintain Proxmox VE and Proxmox Backup Server environments
- Handle VPN tunnel and static routing issues to ensure reliable connectivity
- Assist in diagnosing and resolving database-related server issues
- Perform website maintenance tasks to ensure uptime and availability, including basic monitoring, updates, and issue resolution
- Assist in resolving hosting-related issues such as SSL, DNS, and service accessibility
- Support internal systems and services by responding to technical incidents and operational requests

IT Network Operation Center (NOC)

Pemuda Berkarya Manunggal

Jakarta, Indonesia

December 2020 - February 2022

- Troubleshoot network and system issues to maintain service availability and performance
- Configured and maintained routers, switches, and wireless radio devices
- Handled VPN tunnel, failover, load balancing, firewall, and static routing issues
- Performed troubleshooting and basic maintenance of PABX / IP PBX systems
- Monitored network traffic and connectivity to identify and resolve potential issues

IT Helpdesk

Pemuda Berkarya Manunggal

Jakarta, Indonesia

September 2019 - December 2020

- Provided first-level technical support for clients via ticketing and direct communication
- Diagnosed and resolved basic network and system-related issues
- Monitored downstream and upstream network performance
- Escalated unresolved issues to the NOC or engineering team as required

IT Helpdesk

Anugrah Karunia Perkasa Abadi

Jakarta, Indonesia

April 2019 - August 2019

- Provided first-level technical support and issue resolution for clients
- Logged, tracked, and followed up on technical complaints
- Assisted in network monitoring and basic troubleshooting tasks

TECHNICAL SKILLS

Networking

- Mikrotik: OSPF, VLAN, Static Routing, Failover, Load Balancing, Firewall, DHCP, VPN/IPsec
- Network Monitoring: Zabbix, LibreNMS, MRTG, Cacti
- Switch Configuration: Cisco, HP, Aruba, Alcatel
- Network Security: Fortigate Firewall

Systems & Infrastructure

- Linux Server: Debian, Ubuntu, CentOS, AlmaLinux, Rocky Linux
- Virtualization: Proxmox VE, Proxmox Backup Server
- Services: DNS Server, Mail Server, Backup Server, FreePBX / VoIP
- Web Server: Apache, NGINX
- Hosting Panel: cPanel

Databases

- MySQL, MariaDB, MongoDB

Tools & Version Control

- Git

Web & Programming Fundamentals

- HTML, CSS
- Basic Java (Academic)

ADDITIONAL INFORMATION

- Strong troubleshooting and analytical skills
- Detail-oriented and responsive in handling incidents
- Comfortable working remotely and independently
